

St. PETER'S UNIVERSITY

St. Peter's Institute of Higher Education and Research
(Declared under section 3 of UGC Act 1956)
Avadi, Chennai – 600 054.

M.E. (COMPUTER SCIENCE AND ENGINEERING) PROGRAMME

(I TO IV SEMESTERS)

REGULATIONS AND SYLLABI

(REGULATIONS – 2012)

(Effective from the Academic Year 2012-'13)

M.E. (COMPUTER SCIENCE AND ENGINEERING) PROGRAMME

Regulations and Syllabi

(Effective from the Academic Year 2012-'13)

- 1. Eligibility:** Candidates who passed B.E. / B.Tech.(CSE / IT / EEE / ECE / Electronics / E&I / ICE / Instrumentation)/M.C.A. / M.Sc.(Computer Science / Computer Technology / Software Engineering / Information Technology / Electronics) of the University or any other equivalent examination thereto are eligible for admission to Two Year M.E.(Computer Science and Engineering) Programme.
- 2. Duration:** Two Years Comprising 4 Semesters. Each semester has a minimum 90 working days with a minimum of 5 hours a day.
- 3. Medium:** English is the medium of instruction and examination.
- 4. Weightage for Internal and End Assessment:** The weightage for Internal Assessment (IA) and End Assessment (EA) be 25:75 unless the ratio is specifically mentioned in the scheme of Examinations.
- 5. Credit System:** Credit system be followed with 18 credits for each semester and each credit is equivalent to 25-30 hours of effective study provided in the Time Table.

6. Scheme of Examinations (for I and IV Semesters)

I Semester

Code No.	Course Title	Credit	Marks		
			CA	EA	Total
112CSPT01	Operation Research	4	25	75	100
112CSPT02	Computer Architecture	2	25	75	100
112CSPT03	Data Structures and Algorithm	3	25	75	100
112CSPT04	Object Oriented Software engineering	2	25	75	100
112CSPT05	Computer Network and Management	3	25	75	100
Practical					
112CSPP01	Data Structures Lab	2	25	75	100
112CSPP02	Networking Lab	2	25	75	100
	Total	18	175	525	700

II Semester

Code No.	Course Title	Credit	Marks		
			CA	EA	Total
Theory					
212CSPT01	Database Technology	2	25	75	100
212CSPT02	Advanced Operating System	3	25	75	100
212CSPT03	Advanced System Software	2	25	75	100
212CSPT04	Information security	2	25	75	100
212CSPT05	Web technology	3	25	75	100
Electives					
212CSPE03	Elective I: Software Quality Assurance	2	25	75	100
Practical					
212CSPP01	Operating System Lab	2	25	75	100
212CSPP02	Web Technology Lab	2	25	75	100
Total		18	200	600	800

III Semester

Code No.	Course Title	Credit	Marks		
			CA	EA	Total
Theory					
312CSPE01	Elective II: Mobile computing	2	25	75	100
312CSPE10	Elective III: Data warehousing and Data Mining	2	25	75	100
312CSPE14	Elective IV : Software Project Management	2	25	75	100
Practical					
312CSPP01	Project Work(Phase I)*	12	25	65	100
	Viva voce			10	
Total		18	100	300	400

* Candidates who have completed Project work (Phase I) successfully are eligible for Project Work (Phase - II) Examination.

IV Semester

Code No.	Course Title	Credit	Marks		
			CA	EA	Total
Practical					
412CSPP01	Project Work(Phase II)*	18	25	65	100
	Viva voce			10	
Total		18	25	75	100

LIST OF ELECTIVES

Course Code	Course Title	Credit	Marks		
			CA	EA	Total
II Semester					
212CSPE01	Network Security	2	25	75	100
212CSPE02	Performance evaluation of Computer Systems and Networks	2	25	75	100
212CSPE03	Software Quality Assurance	2	25	75	100
212CSPE04	Theory of computing	2	25	75	100
212CSPE05	Distributed Computing	2	25	75	100
III Semester					
312CSPE01	Mobile computing	2	25	75	100
312CSPE02	Grid computing	2	25	75	100
312CSPE03	Soft computing	2	25	75	100
312CSPE04	Multimedia systems	2	25	75	100
312CSPE05	XML and Web services	2	25	75	100
312CSPE06	Bio Informatics	2	25	75	100
312CSPE07	Embedded systems	2	25	75	100
312CSPE08	Digital Imaging	2	25	75	100
312CSPE09	Ad-hoc Networks	2	25	75	100
312CSPE10	Data warehousing and Data Mining	2	25	75	100
312CSPE11	Agent based intelligent systems	2	25	75	100
312CSPE12	Visualization techniques	2	25	75	100
312CSPE13	Advanced databases	2	25	75	100
312CSPE14	Software Project Management	2	25	75	100
312CSPE15	Component based technology	2	25	75	100

- 7. Passing Requirements:** The minimum pass mark (raw score) be 50% in End Assessment (EA) and 50% in Continuous Assessment (CA) and End Assessment (EA) put together. No minimum mark (raw score) in Continuous Assessment (CA) be prescribed unless it is specifically mentioned in the scheme of Examination.
- 8. Grading System:** Grading System on a 10 Point Scale be followed with 1 mark = 0.1 Grade point to successful candidates as given below.

CONVERSION TABLE

(1 mark = 0.1 Grade Point on a 10 Point Scale)

Range of Marks	Grade Point	Letter Grade	Classification
90 to 100	9.0 to 10.0	O	First Class
80 to 89	8.0 to 8.9	A	First Class
70 to 79	7.0 to 7.9	B	First Class
60 to 69	6.0 to 6.9	C	First Class
50 to 59	5.0 to 5.9	D	Second Class
0 to 49	0 to 4.9	F	Reappearance

Procedure for Calculation

Cumulative Grade Point Average (CGPA)	= $\frac{\text{Sum of Weighted Grade Points}}{\text{Total Credits}}$
	= $\frac{\sum (CA+EA) C}{\sum C}$
Where Weighted Grade Points in each Course	= Grade Points (CA+EA) multiplied by Credits
	= (CA+EA)C
Weighted Cumulative Percentage of Marks(WCPM)	= CGPAx10

C- Credit, CA-Continuous Assessment, EA- End Assessment

9. Pattern of the Question Paper: The question paper for End Assessment will be set for three hours and for the maximum of 100 marks with following divisions and details.

Part A: 10 questions (with equal distribution to all units in the syllabus).
Each question carries 2 marks.

Part B: 5 question with either or type (with equal distribution to all units in the syllabus). Each question carries 16 marks.
The total marks scored by the candidates will be reduced to the maximum prescribed in the Regulations.

10. Effective Period of Operation for the Arrear Candidates : Two Year grace period is provided for the candidates to complete the arrear examination, if any.

Registrar

11.Syllabus

112CSPT01 - OPERATIONS RESEARCH

UNIT I CALCULUS OF VARIATION

Introduction – Euler's equation – several dependent variables Lagrange's equation of dynamics – integrals involving derivatives higher than the first – problem with constraints – direct methods and Eigen value problems.

UNIT II MATRIX THEORY

Eigen value using OR transformation – generalized eigen vectors – canonical forms singular value decomposition and applications- pseudo inverse- least square approximation

UNIT III LINEAR PROGRAMMING PROBLEM

Graphical method – simplex method – Big M technique- Integer programming

UNIT IV ASSIGNMENT AND TRANSPORTATION PROBLEMS

Mathematical formulation of an Assignment Problem- Transportation – Mathematical formulation – North west corner rule – least cost method- Vogel's Approximation – unbalanced , transportation problem- Maximisation Problem in transportation- critical path method- PERT Techniques

UNIT V DECISION THEORY AND SIMULATION

Decision making environments - Decision making under certainty - Decision making under risk - Decision trees – Advantages of simulation technique – Limitations of simulation technique – Monte Carlo method – Generation of random numbers.

112CSPT02 - COMPUTER ARCHITECTURE

UNIT I FUNDAMENTALS OF COMPUTER DESIGN AND PIPELINING

Fundamentals of Computer Design - Measuring and reporting performance - Quantitative principles of computer design. Instruction set principles - Classifying ISA - Design issues. Pipelining - Basic concepts - Hazards - Implementation - Multicycle operations.

UNIT II INSTRUCTION LEVEL PARALLELISM WITH DYNAMIC APPROACHES

Concepts - Dynamic Scheduling - Dynamic hardware prediction - Multiple issue - Hardware based speculation - Limitations of ILP - Case studies.

UNIT III INSTRUCTION LEVEL PARALLELISM WITH SOFTWARE APPROACHES

Compiler techniques for exposing ILP - Static branch prediction - VLIW - Advanced compiler support - Hardware support for exposing more parallelism - Hardware versus software speculation mechanisms - Case studies.

UNIT IV MULTIPROCESSORS AND MULTICORE ARCHITECTURES

Symmetric and distributed shared memory architectures - Performance issues - Synchronisation issues - Models of memory consistency - Software and hardware multithreading - SMT and CMP architectures - Design issues - Case studies.

UNIT V MEMORY AND I/O

Cache performance - Reducing cache miss penalty and miss rate - Reducing hit time - Main memory and performance - Memory technology. Types of storage devices - Buses - RAID - Reliability, availability and dependability - I/O performance measures - Designing an I/O system.

112CSPT03 - DATA STRUCTURES AND ALGORITHMS

UNIT I COMPLEXITY ANALYSIS & ELEMENTARY DATA STRUCTURES

Asymptotic notations - Properties of big oh notation - asymptotic notation with several parameters - conditional asymptotic notation - amortized analysis - NP-completeness - NP-hard - recurrence equations - solving recurrence equations - arrays - linked lists - trees.

UNIT II HEAP STRUCTURES

Min-max heaps - Deaps - Leftist heaps - Binomial heaps - Fibonacci heaps - Skew heaps - Lazy-binomial heaps.

UNIT III SEARCH STRUCTURES

Binary search trees - AVL trees - 2-3 trees - 2-3-4 trees - Red-black trees - B-trees - splay trees - Tries.

UNIT IV GREEDY & DIVIDE AND CONQUER

Quicksort - Strassen's matrix multiplication - Convex hull - Tree-vertex splitting - Job sequencing with deadlines - Optimal storage on tapes

UNIT V DYNAMIC PROGRAMMING AND BACKTRACKING

Multistage graphs - 0/1 knapsack using dynamic programming - Flow shop scheduling - 8-queens problem - graph coloring - knapsack using backtracking

112CSPT04 - OBJECT ORIENTED SOFTWARE ENGINEERING

UNIT I INTRODUCTION

System Concepts - Software Engineering Concepts - Development Activities - Managing Software Development - Unified Modeling Language - Project Organization - Communication

UNIT II ANALYSIS

Requirements Elicitation - Concepts - Activities - Management - Analysis Object Model - Analysis Dynamic Models

UNIT III SYSTEM DESIGN

Decomposing the system - Overview of System Design - System Design Concepts - System Design Activities - Addressing Design Goals - Managing System Design

UNIT IV OBJECT DESIGN AND IMPLEMENTATION ISSUES

Reusing Pattern Solutions - Specifying Interfaces - Mapping Models to Code - Testing

UNIT V MANAGING CHANGE

Rationale Management - Configuration Management - Project Management - Software Life Cycle

112CSPT05 - COMPUTER NETWORKS AND MANAGEMENT

UNIT I HIGH SPEED NETWORKS

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LAN's: Fast Ethernet, Gigabit Ethernet, Fibre Channel - Wireless LAN's.

UNIT II CONGESTION AND TRAFFIC MANAGEMENT

Queuing Analysis- Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control - Traffic Management - Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

UNIT III TCP AND ATM CONGESTION CONTROL

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTO backoff - KARN's Algorithm - Window management - Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Frame work, Traffic Control - ABR traffic Management - ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

UNIT IV INTEGRATED AND DIFFERENTIATED SERVICES

Integrated Services Architecture - Approach, Components, Services- Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ - Random Early Detection, Differentiated Services.

UNIT V PROTOCOLS FOR QoS SUPPORT

RSVP - Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol Architecture, Data Transfer Protocol, RTCP.

112CSPP01 - DATA STRUCTURES LAB

1. Min Heap
2. Deaps
3. Leftist Heap
4. AVL Tree
5. B-Tree
6. Tries
7. Quick Sort
8. Convex hul
9. 0/1 Knapsack using Dynamic Programming
10. Graph coloring using backtracking

112CSPP02 - NETWORKING LAB

1. Socket Programming
 - a. TCP Sockets
 - b. UDP Sockets
 - c. Applications using Sockets
2. Simulation of Sliding Window Protocol
3. Simulation of Routing Protocols
4. Development of applications such as DNS/ HTTP/ E - mail/ Multi - user Chat
5. Simulation of Network Management Protocols
6. Study of Network Simulator Packages - such as opnet, ns2, etc.

212CSPT01 - DATABASE TECHNOLOGY

UNIT I DISTRIBUTED DATABASES

Distributed Databases Vs Conventional Databases - Architecture - Fragmentation - Query Processing - Transaction Processing - Concurrency Control - Recovery.

UNIT II OBJECT ORIENTED DATABASES

Introduction to Object Oriented Data Bases - Approaches - Modeling and Design - Persistence - Query Languages - Transaction - Concurrency - Multi Version Locks - Recovery.

UNIT III EMERGING SYSTEMS

Enhanced Data Models - Client/Server Model - Data Warehousing and Data Mining - Web Databases - Mobile Databases.

UNIT IV DATABASE DESIGN ISSUES

ER Model - Normalization - Security - Integrity - Consistency - Database Tuning - Optimization and Research Issues - Design of Temporal Databases - Spatial Databases.

UNIT V CURRENT ISSUES

Rules - Knowledge Bases - Active And Deductive Databases - Parallel Databases - Multimedia Databases - Image Databases - Text Database

212CSPT02 -ADVANCED OPERATING SYSTEMS

UNIT I INTRODUCTION

Overview - Functions of an Operating System - Design Approaches - Types of Advanced Operating System - Synchronization Mechanisms - Concept of a Process, Concurrent Processes - The Critical Section Problem, Other Synchronization Problems - Language Mechanisms for Synchronization - Axiomatic Verification of Parallel Programs - Process Deadlocks - Preliminaries - Models of Deadlocks, Resources, System State - Necessary and Sufficient conditions for a Deadlock - Systems with Single-Unit Requests, Consumable Resources, Reusable Resources.

UNIT II DISTRIBUTED OPERATING SYSTEMS

Introduction - Issues - Communication Primitives - Inherent Limitations - Lamport's Logical Clock; Vector Clock; Causal Ordering; Global State; Cuts; Termination Detection. Distributed Mutual Exclusion - Non-Token Based Algorithms - Lamport's Algorithm - Token-Based Algorithms - Suzuki-Kasami's Broadcast Algorithm - Distributed Deadlock Detection - Issues - Centralized Deadlock-Detection Algorithms - Distributed Deadlock-Detection Algorithms. Agreement Protocols - Classification - Solutions -Applications.

UNIT III DISTRIBUTED RESOURCE MANAGEMENT

Distributed File systems - Architecture - Mechanisms - Design Issues - Distributed Shared Memory - Architecture - Algorithm - Protocols - Design Issues. Distributed Scheduling - Issues - Components - Algorithms.

UNIT IV FAILURE RECOVERY AND FAULT TOLERANCE

Basic Concepts-Classification of Failures - Basic Approaches to Recovery; Recovery in Concurrent System; Synchronous and Asynchronous Checkpointing and Recovery; Check pointing in Distributed Database Systems; Fault Tolerance; Issues - Two-phase and Non-blocking Commit Protocols; Voting Protocols; Dynamic Voting Protocols;

UNIT V MULTIPROCESSOR AND DATABASE OPERATING SYSTEMS

Structures - Design Issues - Threads - Process Synchronization - Processor Scheduling - Memory Management - Reliability / Fault Tolerance; Database Operating Systems - Introduction - Concurrency Control - Distributed Database Systems - Concurrency Control Algorithms.

212CSPT03 - ADVANCED SYSTEM SOFTWARE

UNIT I

Basic Compiler Functions - Grammars - Lexical Analysis - Syntactic Analysis - Code Generation - Heap Management - Parameter Passing Methods - Semantics of Calls and Returns - Implementing Subprograms - Stack Dynamic Local Variables - Dynamic binding of method calls to methods - Overview of Memory Management, Virtual Memory, Process Creation - Overview of I/O Systems, Device Drivers, System Boot

UNIT II

Introduction and Overview - Symbol table structure - Local and Global Symbol table management Intermediate representation - Issues - High level, medium level, low level intermediate languages - MIR, HIR, LIR - ICAN for Intermediate code - Optimization - Early optimization - loop optimization

UNIT III

Procedure optimization - in-line expansion - leaf routine optimization and shrink wrapping - register allocation and assignment - graph coloring - data flow analysis - constant propagation - alias analysis - register allocation - global references - Optimization for memory hierarchy - Code Scheduling - Instruction scheduling - Speculative scheduling - Software pipelining - trace scheduling - Run-time support - Register usage - local stack frame - run-time stack - Code sharing - position-independent code

UNIT IV

Introduction to Virtual Machines (VM) - Pascal P-Code VM - Object-Oriented VMs - Java VM Architecture - Common Language Infrastructure - Dynamic Class Loading - Security - Garbage Collection - Optimization

UNIT V

Emulation - Interpretation and Binary Translation - Instruction Set Issues - Process Virtual Machines - Profiling - Migration - Grids - Examples of real world implementations of system software

212CSPT04 - INFORMATION SECURITY

UNIT I

An Overview of Computer Security, Access Control Matrix, Policy-Security policies, Confidentiality policies, Integrity policies and Hybrid policies.

UNIT II

Cryptography- Key management - Session and Interchange keys, Key exchange and generation, Cryptographic Key Infrastructure, Storing and Revoking Keys, Digital Signatures, Cipher Techniques

UNIT III

Systems: Design Principles, Representing Identity, Access Control Mechanisms, Information Flow and Confinement Problem.

UNIT IV

Malicious Logic, Vulnerability Analysis, Auditing and Intrusion Detection

UNIT V

Network Security, System Security, User Security and Program Security

TEXT BOOK:

1. Matt Bishop , "Computer Security art and science " , Second Edition, Pearson Education

REFERENCES:

212CSPT06 - WEB TECHNOLOGY

UNIT I

Web essentials - clients - servers - communication - markup languages - XHTML - simple XHTML pages style sheets - CSS

UNIT II

Client side programming - Java script language - java script objects - host objects : Browsers and the DOM

UNIT III

Server side programming - java servlets - basics - simple program - separating programming and presentation - ASP/JSP - JSP basics ASP/JSP objects - simple ASP/JSP pages.

UNIT IV

Representing Web data - data base connectivity - JDBC - Dynamic Web pages - XML - DTD - XML schema - DOM - SAX - Xquery.

UNIT V

Building Web applications - cookies - sessions - open source environment - PHP - MYSQL - case studies.

TEXT BOOKS:

1. Jeffrey C Jackson, " Web Technology - A computer Science perspective", Persoson Education, 2007.
2. Chris Bates, "Web Programming - Building Internet Applications, "Wiley India, 2006.

212CSPP01 - OPERATING SYSTEM LAB

MULTIPROCESSOR OPERATING SYSTEMS

PROGRAM 1 - Semaphores - Multiprocessor operating systems

Assume there are three processes: Pa, Pb, and Pc. Only Pa can output the letter A, Pb B, and Pc C.

Utilizing only semaphores (and no other variables) the processes are synchronized so that the output satisfies the following conditions:

- a) A B must be output before any C's can be output.
- b) B's and C's must alternate in the output string, that is, after the first B is output, another B cannot be output until a C is output. Similarly, once a C is output, another C cannot be output until a B is output.
- c) The total number of B's and C's which have been output at any given point in the output string cannot exceed the number of A's which have been output up to that point.

Examples

AACB	--invalid, violates a) --
ABACAC	invalid, violates b)
AABCABC	-- invalid, violates c)
AABCAAABC	- valid
AAAABCBC	- valid
AB	- valid

PROGRAM 2 - Multithreading - Multiprocessor operating systems

The Cigarette Smokers Problem

Consider a simulation with three smoker threads and one agent thread. Each smoker continuously makes a cigarette and smokes it. But to make a cigarette, a smoker needs three ingredients: tobacco, paper, and matches. One of the smoker threads has only paper, another has only tobacco, and the third has only matches. The agent thread has an infinite supply of all three materials. The three smoker threads are initially blocked. The agent places two randomly chosen (different) ingredients on the table and unblocks the one smoker who has the remaining ingredient. The agent then blocks. The unblocked smoker removes the two ingredients from the table, makes a cigarette, and smokes it for a random amount of time, unblocking the agent on completion of smoking the cigarette. The agent then puts out another random two of the three ingredients, and the cycle repeats.

Write a multi-class multithreaded Java program that uses a monitor to synchronize the agent thread and the three smoker threads. **Do not mechanically translate semaphore code into monitor code!** The agent thread executes in an agent object created from an agent class. Each smoker thread executes in a smoker object. All smoker objects are created from one smoker class whose constructor is used to specify the ingredient possessed by the smoker object. A driver class with a main method constructs the objects and starts the threads.

Use a single monitor object instantiated from a class Control for synchronization. Each of the four threads invokes a synchronized monitor method for its synchronization. No semaphores are allowed. No synchronized blocks are allowed, only synchronized methods. No busy waiting is allowed. No calls to nap inside a synchronized method are allowed (do not nap while holding the monitor object's lock, that is, while inside a synchronized method or while inside a method called by a synchronized method).

PROGRAM 3 - Multiple sleeping barbers - Multiprocessor operating systems

Write a multi-class multithreaded Java program that simulates multiple sleeping barbers, all in one barbershop that has a finite number of chairs in the waiting room. Each customer is instantiated from a single Customer class, each barber is instantiated from a single Barber class.

Network operating systems

PROGRAM 4 - Network operating systems

Establish a Lab setup for the following network operating systems based programs based on the skills in networking on your own. E.g. for identifying networking hardware, identifying different kinds of network cabling and network interface cards can be done.

Exercises

1. Identifying Local Area Network Hardware
2. Exploring Local Area Network Configuration Options
3. Verifying TCP/IP Settings
4. Sharing Resources
5. Testing LAN Connections

Real time operating systems

PROGRAM 5 - Real time operating systems

A real-time program implementing an alarm clock shall be developed.
[Alarm clock, using C and Simple_OS]

The program shall fulfill the following requirements:

Clock with alarm functionality shall be implemented, It shall be possible to set the time, It shall

be possible to set the alarm time, the alarm shall be *enabled* when the alarm time is set, the alarm shall be *activated* when the alarm is enabled, and when the current time is equal to the alarm time, an activated alarm must be acknowledged. Acknowledgement of an alarm shall lead

to the alarm being *disabled*, the alarm is enabled again when a new alarm time is set, an alarm

which is not acknowledged shall be repeated every 10 seconds. The program shall communicate with a graphical user interface, where the current time shall be displayed, and where the alarm time shall be displayed when the alarm is enabled. It shall be possible to terminate the program, using a command which is sent from the graphical user interface.

Database operating systems

PROGRAM 6 - Transactions and Concurrency -Database operating systems

Exercises

Assume any application(e.g.banking) on your own and do the following exercises.

1. Investigate and implement the ObjectStore's concurrency options.
2. Implement the concurrency conflict that occurs between multiple client applications.
3. Observe and implement the implication of nested transactions.

Distributed operating systems

PROGRAM 7 - Distributed operating systems

1. Design a RMI Lottery application. Each time you run the client program -- "**java LotteryClient n**", the server program "**LotteryServer**" will generate **n** set of Lottery numbers. Here **n** is a positive integer, representing the money you will spend on Lottery in sterling pounds. Write this program in a proper engineering manner, i.e. there should be specifications, design (flow chart, FD, or pseudo code), coding, test/debug, and documentation.

2. Consider a distributed system that consists of two processes which communicate with each other. Let P be a state predicate on the local state of one process and Q be a state predicate on the local state of the other process. Assume that neither P nor Q are stable (i.e. closed).

Design a superimposed computation which detects that there exists an interleaving of underlying events in this system where at some state $P \wedge Q$ holds. (A superposed computation is one that does not affect the underlying system; it may "read" but not "write" the state of the underlying system. Events in a superposed computation may occur in at the same instant as the underlying events and/or at different instants.) State any assumptions you make.

[Hint: Use vector clocks.]

212CSPP02 - WEB TECHNOLOGY LAB

1. Creation of HTML pages with frames, links, tables and other tags
2. Usage of internal and external CSS along with HTML pages
3. Client side Programming
 - i. Java script for displaying date and comparing two dates
 - ii. Form Validation including text field, radio buttons, check boxes, list box and other controls
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc
 - i. Writing online applications such as shopping, railway/air/bus ticket reservation system with set of ASP/JSP pages
 - ii. Using sessions and cookies as part of the web application
5. Writing Servlet Program using HTTP Servlet
6. Any online application with database access
7. Creation of XML document for a specific domain
8. Writing DTD or XML schema for the domain specific XML document
9. Parsing an XML document using DOM and SAX Parsers
10. Sample web application development in the open source environment

212CSPE01 - NETWORK SECURITY

UNIT I INTRODUCTION

Attacks - Services - Mechanisms - Conventional Encryption - Classical And Modern Techniques
- Encryption Algorithms - Confidentiality.

UNIT II PUBLIC KEY ENCRYPTION

RSA - Elliptic Curve Cryptography - Number Theory Concepts

UNIT III MESSAGE AUTHENTICATION

Hash Functions - Digest Functions - Digital Signatures - Authentication Protocols.

UNIT IV NETWORK SECURITY PRACTICE

Authentication, Applications - Electronic Mail Security - IP Security - Web Security.

UNIT V SYSTEM SECURITY

Intruders - Viruses - Worms - Firewalls Design Principles - Trusted Systems.

TEXT BOOK:

1. Stallings, Cryptography & Network Security - Principles & Practice, Prentice Hall, 3rd Edition 2002.

REFERENCES:

1. Bruce, Schneier, Applied Cryptography, 2nd Edition, Toha Wiley & Sons, 1996.
2. Man Young Rhee, "Internet Security", Wiley, 2003.
3. Pfleeger & Pfleeger, "Security in Computing", Pearson Education, 3rd Edition, 2003.

212CSPE02 - PERFORMANCE EVALUATION OF COMPUTER SYSTEMS AND NETWORKS

UNIT I

Performance Characteristics - Requirement Analysis: Concepts -User, Device, Network Requirements - Process -Developing RMA ,Delay, Capacity Requirements - Flow Analysis - Identifying and Developing Flows -Flow Models -Flow Prioritization -Specification.

UNIT II

Random variables - Stochastic process -Link Delay components - Queuing Models - Little's Theorem - Birth & Death process - Queuing Disciplines.

UNIT III

Markovian FIFO Queuing Systems - M/M/1 - M/M/a - M/M/ ∞ - M/G/1 - M/M/m/m and other Markov-Non-Markovian and self-similar models - Network of Queues -Burke's Theorem - Jackson's Theorem.

UNIT IV

Multi-User Uplinks/Downlinks - Capacity Regions - Opportunistic Scheduling for Stability and Max Throughput - Multi-Hop Routing - Mobile Networks - Throughput Optimality and Backpressure

UNIT V

Performance of Optimal Lyapunov Networking - Energy Optimality- Energy-Delay Tradeoffs - Virtual Cost Queues - Average Power Constraints - Flow Control with Infinite Demand - Auxiliary Variables - Flow Control with Finite Demand - General Utility Optimization.

TEXT BOOKS:

1. James D.McCabe , Network Analysis , Architecture and Design , 2nd Edition,Elsevier,2003
2. Bertsekas & Gallager , Data Networks , second edition ,Pearson Education,2003
3. Introduction to Probability Models by Sheldon Ross (8th edition) Academic Press, New York ,2003

REFERENCES:

2. Nader F.Mir Computer and Communication Networks,Pearson Education.2007
3. Paul J.Fortier, Howard E.Michel, Computer Systems Performance Evaluation and Prediction, Elsevier,2003

212CSPE03 - SOFTWARE QUALITY ASSURANCE

UNIT I

Introduction to software quality - challenges - objectives - quality factors - components of SQA - contract review - development and quality plans - SQA components in project life cycle - SQA defect removal policies - Reviews

UNIT II

Basics of software testing - test generation from requirements - finite state models - combinatorial designs - test selection, minimization and prioritization for regression testing - test adequacy, assessment and enhancement

UNIT III

Testing strategies - white box and black box approach - integration testing - system and acceptance testing - performance testing - regression testing - internationalization testing - ad-hoc testing - website testing - usability testing - accessibility testing. Test plan - management - execution and reporting - software test automation - automated testing tools

UNIT IV

Hierarchical models of software quality - software quality metrics -function points -Software product quality - software maintenance quality - effect of case tools - software quality infrastructure - procedures - certifications - configuration management - documentation control.

UNIT V

Project progress control - costs - quality management standards - project process standards - management and its role in SQA - SQA unit

REFERENCES:

212CSPE04 - THEORY OF COMPUTATION

UNIT I AUTOMATA

Introduction to formal proof - Additional forms of Proof - Inductive Proofs - Finite Automata - Deterministic Finite Automata - Non-deterministic Finite Automata - Finite Automata with Epsilon Transitions.

UNIT II REGULAR EXPRESSIONS AND LANGUAGES

Regular Expression - FA and Regular Expressions - Proving Languages not to be regular - Closure Properties of Regular Languages - Equivalence and Minimization of Automata.

UNIT III CONTEXT FREE GRAMMAR AND LANGUAGES

CFG - Parse Trees - Ambiguity in Grammars and Languages - Definition of the Pushdown Automata - Languages of a Pushdown Automata - Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata.

UNIT IV PROPERTIES OF CONTEXT FREE LANGUAGES

Normal Forms for CFG - Pumping Lemma for CFL - Closure Properties of CFL - Turing Machines - Programming Techniques for TM.

UNIT V INDECIDABILITY

A Language That Is Not Recursive Enumerable - An Undecidable Problem that Is RE - Undecidable Problems about TM - Post's Correspondence Problem, The Class P And NP.

TEXT BOOK:

1. J.E.Hopcroft, R.Motwani and J.D Ullman, "Introduction to Automata Theory, Languages and Computations", Second Edition, Pearson Education, 2003.

3. Micheal Sipser, "Introduction of the Theory and Computation", Thomson Brokecole, 1997.

212CSPE05 - DISTRIBUTED COMPUTING

UNIT I COMMUNICATION IN DISTRIBUTED ENVIRONMENT

Introduction - Various Paradigms in Distributed Applications - Remote Procedure Call - Remote Object Invocation - Message-Oriented Communication - Unicasting, Multicasting and Broadcasting - Group Communication.

UNIT II DISTRIBUTED OPERATING SYSTEMS

Issues in Distributed Operating System - Threads in Distributed Systems - Clock Synchronization - Causal Ordering - Global States - Election Algorithms - Distributed Mutual Exclusion - Distributed Transactions - Distributed Deadlock - Agreement Protocols .

UNIT III DISTRIBUTED RESOURCE MANAGEMENT

Distributed Shared Memory - Data-Centric Consistency Models - Client-Centric Consistency Models - Ivy - Munin - Distributed Scheduling - Distributed File Systems - Sun NFS.

UNIT IV FAULT TOLERANCE AND CONSENSUS

Introduction to Fault Tolerance - Distributed Commit Protocols - Byzantine Fault Tolerance - Impossibilities in Fault Tolerance.

UNIT V CASE STUDIES

Distributed Object-Based System - CORBA - COM+ - Distributed Coordination-Based System - JINI.

REFERENCES:

1. George Coulouris, Jean Dollimore, Tim Kindberg, "Distributed Systems Concepts and Design", Third Edition, Pearson Education Asia, 2002.

312CSPE01 - MOBILE COMPUTING

UNIT I WIRELESS COMMUNICATION FUNDAMENTALS

Introduction - Wireless transmission - Frequencies for radio transmission - Signals - Antennas - Signal Propagation - Multiplexing - Modulations - Spread spectrum - MAC - SDMA - FDMA - TDMA - CDMA - Cellular Wireless Networks.

UNIT II TELECOMMUNICATION SYSTEMS

GSM - System Architecture - Protocols - Connection Establishment - Frequency Allocation - Routing - Handover - Security - GPRS.

UNIT III WIRELESS NETWORKS

Wireless LAN - IEEE 802.11 Standards - Architecture - Services - HIPERLAN - Adhoc Network - Blue Tooth.

UNIT IV NETWORK LAYER

Mobile IP - Dynamic Host Configuration Protocol - Routing - DSDV - DSR - AODV - ZRP - ODMR.

UNIT V TRANSPORT AND APPLICATION LAYERS

TCP over Wireless Networks - Indirect TCP - Snooping TCP - Mobile TCP - Fast Retransmit / Fast Recovery - Transmission/Timeout Freezing - Selective Retransmission - Transaction Oriented TCP - WAP - WAP Architecture - WDP - WTLS - WTP - WSP - WML -WML Script - WAE - WTA.

TEXT BOOKS:

1. Jochen Schiller, "Mobile Communications", Second Edition, Pearson Education, 2003.
2. William Stallings, "Wireless Communications and Networks", Pearson Education, 2002.

REFERENCES:

1. Kaveh Pahlavan, Prasanth Krishnamoorthy, "Principles of Wireless Networks", First Edition, Pearson Education, 2003.

3. C.K.Toh, "AdHoc Mobile Wireless Networks", First Edition, Pearson Education, 2002.
4. Burkhardt, "Pervasive Computing", First Edition, Pearson Education, 2003.

312CSPE02 - GRID COMPUTING

UNIT I INTRODUCTION TO GRID COMPUTING

Introduction - The Grid - Past, Present and Future - Applications of grid computing organizations and their roles.

UNIT II GRID COMPUTING ARCHITURE

Grid Computing anatomy - Next generation of Grid computing initiatives-Merging the Grid services architecture with Web services architecture.

UNIT III GRID COMPUTING TECHNOLOGIES

OGSA - Sample use cases that drive the OGSA platform components - OGSI and WSRF-OGSA Basic Services - Security standards for grid computing.

UNIT IV GRID COMPUTING TOOL KIT

Globus Toolkit -Versions - Architecture -GT Programming model -A sample grid service implementation.

UNIT V HIGH LEVEL GRID SERVICES

High level grid services - OGSI .NET middleware Solution Mobile OGSI.NET for Grid computing on Mobile devices.

TEXT BOOK:

1. Joshy Joseph & Craig Fellenstein, "Grid Computing", Pearson/PHI PTR-2003.

REFERENCES:

1. Fran Berman, Geoffrey Fox, Anthony J.G. Hey, "Grid Computing: Making the Global Infrastructure a reality ", John Wiley and sons,2003.
2. Ahmar Abbas, "Grid Computing: A Practical Guide to Technology and Applications", Charles River media, 2003.

312CSPE03 - SOFT COMPUTING

UNIT I INTRODUCTION TO SOFT COMPUTING AND NEURAL NETWORKS

Evolution of Computing - Soft Computing Constituents - From Conventional AI to Computational Intelligence - Machine Learning Basics

UNIT II GENETIC ALGORITHMS

Introduction to Genetic Algorithms (GA) - Applications of GA in Machine Learning - Machine Learning Approach to Knowledge Acquisition.

UNIT III NEURAL NETWORKS

Machine Learning Using Neural Network, Adaptive Networks - Feed forward Networks - Supervised Learning Neural Networks - Radial Basis Function Networks - Reinforcement Learning - Unsupervised Learning Neural Networks - Adaptive Resonance architectures - Advances in Neural networks.

UNIT IV FUZZY LOGIC

Fuzzy Sets - Operations on Fuzzy Sets - Fuzzy Relations - Membership Functions- Fuzzy Rules and Fuzzy Reasoning - Fuzzy Inference Systems - Fuzzy Expert Systems - Fuzzy Decision Making.

UNIT V NEURO-FUZZY MODELING

Adaptive Neuro-Fuzzy Inference Systems - Coactive Neuro-Fuzzy Modeling - Classification and Regression Trees - Data Clustering Algorithms - Rulebase Structure Identification - Neuro-Fuzzy Control - Case studies.

TEXT BOOKS:

1. Jyh-Shing Roger Jang, Chuen-Tsai Sun, Eiji Mizutani, "Neuro-Fuzzy and Soft Computing", Prentice-Hall of India, 2003.
2. George J. Klir and Bo Yuan, "Fuzzy Sets and Fuzzy Logic-Theory and Applications", Prentice Hall, 1995.
3. James A. Freeman and David M. Skapura, "Neural Networks Algorithms, Applications, and Programming Techniques", Pearson Edn., 2003.

4. S.N.Sivanandam · S.N.Deepa, " Introduction to Genetic Algorithms", Springer, 2007.
5. Jacek M. Zurada, "Introduction to Artificial Neural Systems", PWS Publishers, 1992.

312CSPE04 - MULTIMEDIA SYSTEMS

UNIT I INTRODUCTION AND QOS

Introduction-QOS Requirements and Constraints-Concepts-Resources- Establishment Phase-Run-Time Phase-Management Architectures.

UNIT II OPERATING SYSTEMS

Real-Time Processing-Scheduling-Interprocess Communication-Memory and Management-Server Architecture-Disk Management.

UNIT III FILE SYSTEMS AND NETWORKS

Traditional and Multimedia File Systems-Caching Policy-Batching-Piggy backing-Ethernet-Gigabit Ethernet-Token Ring-100VG Any LAN-Fiber Distributed Data Interface (FDDI)- ATM Networks-MAN-WAN.

UNIT IV COMMUNICATION

Transport Subsystem-Protocol Support for QOS-Transport of Multimedia-Computer Supported Cooperative Work-Architecture-Session Management-MBone Applications.

UNIT V SYNCHRONIZATION

Synchronization in Multimedia Systems-Presentation-Synchronization Types-Multimedia Synchronization Methods-Case Studies-MHEG-MODE-ACME.

TEXT BOOKS:

1. Ralf Steinmetz and Klara Nahrstedt, "Multimedia Systems", Springer, I Edition 2004.

REFERENCES:

5. Ze-Nian Li and Mark S. Drew, Fundamentals of Multimedia, Pearson, 2004.

312CSPE05 - XML AND WEB SERVICES

UNIT I XML TECHNOLOGY FAMILY

XML - benefits - Advantages of XML over HTML - EDL -Databases - XML based standards - DTD -XML Schemas - X- Files - XML processing - DOM -SAX- presentation technologies - XSL - XFORMS - XHTML - voice XML - Transformation - XSLT - XLINK - XPATH -XQ

UNIT II ARCHITECTING WEB SERVICES

Business motivations for web services - B2B - B2C- Technical motivations - limitations of CORBA and DCOM - Service - oriented Architecture (SOA) - Architecting web services - Implementation view - web services technology stack - logical view - composition of web services - deployment view - from application server to peer to peer - process view - life in the runtime

UNIT III WEB SERVICES BUILDING BLOCK

Transport protocols for web services - messaging with web services - protocols - SOAP - describing web services - WSDL - Anatomy of WSDL - manipulating WSDL - web service policy - Discovering web services - UDDI - Anatomy of UDDI- Web service inspection - Ad-Hoc Discovery - Securing web services.

UNIT IV IMPLEMENTING XML IN E-BUSINESS

B2B - B2C Applications - Different types of B2B interaction - Components of e-business XML systems - ebXML - Rosetta Net Applied XML in vertical industry - Web services for mobile devices.

UNIT V XML AND CONTENT MANAGEMENT

Semantic Web - Role of Meta data in web content - Resource Description Framework - RDF schema - Architecture of semantic web - content management workflow - XLANG -WSFL.

TEXT BOOKS:

1. Ron schmelzer et al, "XML and Web Services", Pearson Education, 2002.
2. Sandeep Chatterjee and James Webber, "Developing Enterprise Web Services: An Architect's Guide", Prentice Hall, 2004.

REFERENCES

1. Frank P. Coyle, "XML, Web Services and the Data Revolution", Pearson Education, 2002.
2. Keith Ballinger, ".NET Web Services Architecture and Implementation", Pearson Education, 2003.
3. Henry Bequet and Meeraj Kunumpurath, "Beginning Java Web Services", Apress, 2004.
4. Russ Basiura and Mike Batongbacal, "Professional ASP.NET Web Services", Apress,2.

312CSPE06 - BIO INFORMATICS

UNIT I INTRODUCTORY CONCEPTS

The Central Dogma - The Killer Application - Parallel Universes - Watson's Definition - Top Down Versus Bottom up - Information Flow - Convergence - Databases - Data Management - Data Life Cycle - Database Technology - Interfaces - Implementation - Networks - Geographical Scope - Communication Models - Transmissions Technology - Protocols - Bandwidth - Topology - Hardware - Contents - Security - Ownership - Implementation - Management.

UNIT II SEARCH ENGINES AND DATA VISUALIZATION

The search process - Search Engine Technology - Searching and Information Theory - Computational methods - Search Engines and Knowledge Management - Data Visualization - sequence visualization - structure visualization - user Interface - Animation Versus simulation - General Purpose Technologies.

UNIT III STATISTICS AND DATA MINING

Statistical concepts - Microarrays - Imperfect Data - Randomness - Variability - Approximation - Interface Noise - Assumptions - Sampling and Distributions - Hypothesis Testing - Quantifying Randomness - Data Analysis - Tool selection statistics of Alignment - Clustering and Classification - Data Mining - Methods - Selection and Sampling - Preprocessing and Cleaning - Transformation and Reduction - Data Mining Methods - Evaluation - Visualization - Designing new queries - Pattern Recognition and Discovery - Machine Learning - Text Mining - Tools.

UNIT IV PATTERN MATCHING

Pairwise sequence alignment - Local versus global alignment - Multiple sequence alignment - Computational methods - Dot Matrix analysis - Substitution matrices - Dynamic Programming - Word methods - Bayesian methods - Multiple sequence alignment - Dynamic Programming - Progressive strategies - Iterative strategies - Tools - Nucleotide Pattern Matching - Polypeptide pattern matching - Utilities - Sequence Databases.

UNIT V MODELING AND SIMULATION

Drug Discovery - components - process - Perspectives - Numeric considerations - Algorithms - Hardware - Issues - Protein structure - AbInitio Methods - Heuristic methods - Systems Biology - Tools - Collaboration and Communications - standards - Issues - Security - Intellectual property.

REFERENCES:

1. Bryan Bergeron, "Bio Informatics Computing", Second Edition, Pearson Education, 2003.
2. T.K.Attwood and D.J. Perry Smith, "Introduction to Bio Informatics, Longman Essen, 1999.

312CSPE07 - EMBEDDED SYSTEMS

UNIT I EMBEDDED COMPUTING

Challenges of Embedded Systems - Embedded system design process. Embedded processors - ARM processor - Architecture, ARM and Thumb Instruction sets

UNIT II EMBEDDED C PROGRAMMING

C-looping structures - Register allocation - Function calls - Pointer aliasing - structure arrangement - bit fields - unaligned data and endianness - inline functions and inline assembly - portability issues.

UNIT III OPTIMIZING ASSEMBLY CODE

Profiling and cycle counting - instruction scheduling - Register allocation - conditional execution - looping constructs - bit manipulation - efficient switches - optimized primitives.

UNIT IV PROCESSES AND OPERATING SYSTEMS

Multiple tasks and processes - Context switching - Scheduling policies - Interprocess communication mechanisms - Exception and interrupt handling - Performance issues.

UNIT V EMBEDDED SYSTEM DEVELOPMENT

Meeting real time constraints - Multi-state systems and function sequences. Embedded software development tools - Emulators and debuggers. Design methodologies - Case studies - Complete design of example embedded systems.

REFERENCES:

1. Andrew N Sloss, D. Symes, C. Wright, " ARM System Developers Guide", Morgan Kaufmann / Elsevier, 2006.

4. Steve Heath, "Embedded System Design" , Elsevier, 2nd edition, 2003.

312CSPE08 - DIGITAL IMAGING

UNIT I FUNDAMENTALS OF IMAGE PROCESSING

Introduction - Steps in Image Processing Systems - Image Acquisition - Sampling and Quantization - Pixel Relationships - Colour Fundamentals and Models, File Formats, Image operations - Arithmetic, Geometric and Morphological.

UNIT II IMAGE ENHANCEMENT

Spatial Domain Gray level Transformations Histogram Processing Spatial Filtering - Smoothing and Sharpening. Frequency Domain : Filtering in Frequency Domain - DFT, FFT, DCT - Smoothing and Sharpening filters - Homomorphic Filtering.

UNIT III IMAGE SEGMENTATION AND FEATURE ANALYSIS

Detection of Discontinuities - Edge Operators - Edge Linking and Boundary Detection - Thresholding - Region Based Segmentation - Morphological WaterSheds - Motion Segmentation, Feature Analysis and Extraction.

UNIT IV MULTI RESOLUTION ANALYSIS AND COMPRESSIONS

Multi Resolution Analysis : Image Pyramids - Multi resolution expansion - Wavelet Transforms. Image Compression : Fundamentals - Models - Elements of Information Theory - Error Free Compression - Lossy Compression - Compression Standards.

UNIT V APPLICATIONS OF IMAGE PROCESSING

Image Classification - Image Recognition - Image Understanding - Video Motion Analysis - Image Fusion - Steganography - Digital Compositing - Mosaics - Colour Image Processing..

REFERENCES:

1. Rafael C.Gonzalez and Richard E.Woods, "Digital Image Processing" Second Edition, Pearson Education, 2003.

3. Anil K.Jain, "Fundamentals of Digital Image Processing", Person Educaiton, 2003.

312CSPE09 - AD-HOC NETWORKS

UNIT I AD-HOC MAC

Introduction - Issues in Ad-Hoc Wireless Networks. MAC Protocols - Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

UNIT II AD-HOC NETWORK ROUTING & TCP

Issues - Classifications of routing protocols - Hierarchical and Power aware. Multicast routing - Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc - Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.

UNIT III WSN -MAC

Introduction - Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols - self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.

UNIT IV WSN ROUTING, LOCALIZATION & QOS

Issues in WSN routing - OLSR, AODV. Localization - Indoor and Sensor Network Localization. QoS in WSN.

UNIT V MESH NETWORKS

Necessity for Mesh Networks - MAC enhancements - IEEE 802.11s Architecture - Opportunistic routing - Self configuration and Auto configuration - Capacity Models - Fairness - Heterogeneous Mesh Networks - Vehicular Mesh Networks.

REFERENCES:

1. C.Siva Ram Murthy and B.Smanoj, " Ad Hoc Wireless Networks - Architectures and Protocols", Pearson Education, 2004.

3. C.K.Toh, "Ad Hoc Mobile Wireless Networks", Pearson Education, 2002.
4. Thomas Krag and Sebastin Buettrich, "Wireless Mesh Networking", O'Reilly Publishers, 2007.

312CSPE10 - DATA WAREHOUSING AND DATA MINING

UNIT I

Data Warehousing and Business Analysis: - Data warehousing Components -Building a Data warehouse - Mapping the Data Warehouse to a Multiprocessor Architecture - DBMS Schemas for Decision Support - Data Extraction, Cleanup, and Transformation Tools -Metadata - reporting - Query tools and Applications - Online Analytical Processing (OLAP) - OLAP and Multidimensional Data Analysis.

UNIT II

Data Mining: - Data Mining Functionalities - Data Preprocessing - Data Cleaning - Data Integration and Transformation - Data Reduction - Data Discretization and Concept Hierarchy Generation.

Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods - Mining Various Kinds of Association Rules - Association Mining to Correlation Analysis - Constraint-Based Association Mining.

UNIT III

Classification and Prediction: - Issues Regarding Classification and Prediction - Classification by Decision Tree Introduction - Bayesian Classification - Rule Based Classification - Classification by Back propagation - Support Vector Machines - Associative Classification - Lazy Learners - Other Classification Methods - Prediction - Accuracy and Error Measures - Evaluating the Accuracy of a Classifier or Predictor - Ensemble Methods - Model Section.

UNIT IV

Cluster Analysis: - Types of Data in Cluster Analysis - A Categorization of Major Clustering Methods - Partitioning Methods - Hierarchical methods - Density-Based Methods - Grid-Based Methods - Model-Based Clustering Methods - Clustering High-Dimensional Data - Constraint-Based Cluster Analysis - Outlier Analysis.

UNIT V

Mining Object, Spatial, Multimedia, Text and Web Data:

Multidimensional Analysis and Descriptive Mining of Complex Data Objects - Spatial Data Mining - Multimedia Data Mining - Text Mining - Mining the World Wide Web.

REFERENCES

312CSPE11 - AGENT BASED INTELLIGENT SYSTEMS

UNIT I INTRODUCTION

Definitions - Foundations - History - Intelligent Agents-Problem Solving-Searching - Heuristics - Constraint Satisfaction Problems - Game playing.

UNIT II KNOWLEDGE REPRESENTATION AND REASONING

Logical Agents-First order logic-First Order Inference-Unification-Chaining- Resolution Strategies-Knowledge Representation-Objects-Actions-Events

UNIT III PLANNING AGENTS

Planning Problem-State Space Search-Partial Order Planning-Graphs-Nondeterministic Domains-Conditional Planning-Continuous Planning-MultiAgent Planning.

UNIT IV AGENTS AND UNCERTAINTY

Acting under uncertainty - Probability Notation-Bayes Rule and use - Bayesian Networks- Other Approaches-Time and Uncertainty-Temporal Models- Utility Theory - Decision Network - Complex Decisions.

UNIT V HIGHER LEVEL AGENTS

Knowledge in Learning-Relevance Information-Statistical Learning Methods-Reinforcement Learning-Communication-Formal Grammar-Augmented Grammars- Future of AI.

TEXT BOOK:

1. Stuart Russell and Peter Norvig, "Artificial Intelligence - A Modern Approach", 2nd Edition, Prentice Hall, 2002

312CSPE12 - VISUALIZATION TECHNIQUES

UNIT I VISUALIZATION

Introduction - Issues - Data Representation - Data Presentation - Interaction

UNIT II FOUNDATIONS FOR DATA VISUALIZATION

Visualization stages - Experimental Semiotics based on Perception Gibson's Affordance theory - A Model of Perceptual Processing - Types of Data.

UNIT III COMPUTER VISUALIZATION

Non-Computer Visualization - Computer Visualization: Exploring Complex Information Spaces - Fisheye Views - Applications - Comprehensible Fisheye views - Fisheye views for 3D data - Non Linear Magnification - Comparing Visualization of Information Spaces - Abstraction in computer Graphics - Abstraction in user interfaces.

UNIT IV MULTIDIMENSIONAL VISUALIZATION

One Dimension - Two Dimensions - Three Dimensions - Multiple Dimensions - Trees - Web Works - Data Mapping: Document Visualization - Workspaces.

UNIT V CASE STUDIES

Small interactive calendars - Selecting one from many - Web browsing through a key hole - Communication analysis - Archival analysis

TEXT BOOKS:

1. Colin Ware, "Information Visualization Perception for Design" Morgan Kaufmann Publishers, 2004, 2nd edition.
2. Robert Spence "Information visualization - Design for interaction", Pearson Education, 2nd Edition, 2007

REFERENCE:

1. Stuart.K.Card, Jock.D.Mackinlay and Ben Shneiderman, "Readings in Information Visualization Using Vision to think", Morgan Kaufmann Publishers.

312CSPE13 - ADVANCED DATABASES

UNIT I PARALLEL AND DISTRIBUTED DATABASES

Database System Architectures: Centralized and Client-Server Architectures - Server System Architectures - Parallel Systems- Distributed Systems - Parallel Databases: I/O Parallelism - Inter and Intra Query Parallelism - Inter and Intra operation Parallelism - Distributed Database Concepts - Distributed Data Storage - Distributed Transactions - Commit Protocols - Concurrency Control - Distributed Query Processing - Three Tier Client Server Architecture- Case Studies.

UNIT II OBJECT AND OBJECT RELATIONAL DATABASES

Concepts for Object Databases: Object Identity - Object structure - Type Constructors - Encapsulation of Operations - Methods - Persistence - Type and Class Hierarchies - Inheritance - Complex Objects - Object Database Standards, Languages and Design: ODMG Model - ODL - OQL - Object Relational and Extended - Relational Systems : Object Relational feature sin SQL/Oracle - Case Studies.

UNIT III XML DATABASES

XML Databases: XML Data Model - DTD - XML Schema - XML Querying - Web Databases - JDBC - Information Retrieval - Data Warehousing - Data Mining

UNIT IV MOBILE DATABASES

Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols- Mobile Database Recovery Schemes

UNIT V MULTIMEDIA DATABASES

Multidimensional Data Structures - Image Databases - Text/Document Databases- Video Databases - Audio Databases - Multimedia Database Design.

312CSPE14 - SOFTWARE PROJECT MANAGEMENT

UNIT I BASIC CONCEPTS

Product, Process and Project - Definition - Product Life Cycle - Project Life Cycle Models.

UNIT II FORMAT PROCESS MODELS AND THEIR USE

Definition and Format model for a process - The ISO 9001 and CMM Models and their relevance to Project Management - Other Emerging Models like People CMM.

UNIT III UMBRELLA ACTIVITIES IN PROJECTS

Metrics - Configuration Management - Software Quality Assurance - Risk Analysis.

UNIT IV IN STREAM ACTIVITIES IN PROJECTS

Project Initiation - Project Planning - Execution and Tracking - Project Wind up - Concept of Process/Project Database.

UNIT V ENGINEERING AND PEOPLE ISSUES IN PROJECT MANAGEMENT

Phases (Requirements, Design, Development, Testing , Maintenance, Deployment) - Engineering Activities and Management Issues in Each Phase - Special Considerations in Project Management for India and Geographical Distribution Issues.

REFERENCES:

312CSPE15 - COMPONENT BASED TECHNOLOGY

UNIT I INTRODUCTION

Software Components - objects - fundamental properties of Component technology - modules - interfaces - callbacks - directory services - component architecture - components and middleware.

UNIT II JAVA COMPONENT TECHNOLOGIES

Threads - Java Beans - Events and connections - properties - introspection - JAR files - reflection - object serialization - Enterprise Java Beans - Distributed Object models - RMI and RMI-IIOP.

UNIT III CORBA TECHNOLOGIES

Java and CORBA - Interface Definition language - Object Request Broker - system object model - portable object adapter - CORBA services - CORBA component model - containers - application server - model driven architecture.

UNIT IV COM AND .NET TECHNOLOGIES

COM - Distributed COM - object reuse - interfaces and versioning - dispatch interfaces - connectable objects - OLE containers and servers - Active X controls - .NET components - assemblies - appdomains - contexts - reflection - remoting.

UNIT V COMPONENT FRAMEWORKS AND DEVELOPMENT

Connectors - contexts - EJB containers - CLR contexts and channels - Black Box component framework - directory objects - cross-development environment - component-oriented programming - Component design and implementation tools - testing tools - assembly tools.
